

IN THE CLAIMS:

1 1. (Cancelled)

1 2. (Cancelled)

1 3. (Cancelled)

1 4. (Cancelled)

1 5. (Cancelled)

1 6. (Cancelled)

1 7. (Cancelled)

1 8. (Currently Amended) An internet web browsing method according to Claim 7 17
2 wherein sufficient data is deemed to have been received when data which would allow changes to
3 the web page to be achieved up to the previously noted highest y-coordinate point or level has been
4 received.

1 9. (Cancelled)

1 10. (Cancelled)

1 11. (Cancelled)

1 12. (Cancelled)

1 13. (Cancelled)

1 14. (Cancelled)

1 15. (Cancelled)

1 16. (Cancelled)

1 17. (Currently Amended) An internet web browsing method, said method comprising
2 the steps of:

3 identifying and receiving data for a web page in response to instructions from a user;
4 processing said received data by a browser to generate a web page connected thereto;
5 displaying at least part of said web page corresponding to a first portion of data;
6 preventing the browser from reformatting the web page while the browser receives
7 further data;

8 wherein when a predetermined event occurs in the reception of data that would
9 conventionally cause an immediate reformat of the web page, the highest y-coordinate point or level
10 in the displayed page that would be affected by the reformat is noted and commences a time interval;

11 reformatting said selected web page by the browser after said web page is selected
12 and while further data is being received by the browser, only after:

13 either a predetermined amount of data has been received by the browser,
14 or after a predetermined time has elapsed since a previous reformat of that web page
15 if said predetermined amount of data is not received within said predetermined time,

16 wherein a reformatting of the page display can occur during the time interval if all
17 or a predefined proportion of data for the page is received during the time interval;

18 said predetermined amount of data and predetermined time being specified prior to
19 obtaining data for that web page such that the number of reformats required in displaying the web
20 page as data is received is reduced; and

21 displaying the reformatted web page.

1 18. (Previously Presented) An internet web browsing method, said method comprising
2 the steps of:

3 identifying and receiving data for a web page in response to instructions from a user;
4 processing said received data by a browser to generate a web page;
5 displaying at least a part of said web page corresponding to a first portion of data;
6 determining and noting a highest y-coordinate point or level in the displayed portion
7 of the web page and commencing a timer;

8 storing any further data received during a time interval of the time and preventing the
9 browser from reformatting the web page while the browser receives said further data;

10 reformatting said selected web page from the top of said highest y-coordinate point
11 only after a predetermined amount of data has been received by the browser or after the

predetermined time interval has elapsed since a previous reformat of that web page;
said predetermined amount of data and predetermined time being specified prior to
obtaining data for that web page such that the number of reformats required in displaying the web
page as data is received is reduced; and
displaying the reformatted web page.

19. (Cancelled)

20. (Previously Presented) An internet web browsing method, said method comprising
the steps of:
identifying and receiving data for a web page in response to instructions from a user;
processing said received data by a browser to generate a web page;
displaying at least a first portion of said received data for said web page;
determining and noting a highest y-coordinate point or level in the displayed portion
of the web page and commencing a timer with a predetermined time interval;
storing any further data received during the predetermined time interval and
preventing the browser from reformatting the web page while the browser receives said further data;
overriding the timer and allowing the web page to be reformatted if a predetermined
amount of data has been received;
if the timer having the predetermined time interval continues, then said selected web
page is reformatted from the top of said highest y-coordinate point only after the predetermined time
interval has elapsed since a previous reformat of that web page;
displaying the reformatted web page; and

16 wherein said predetermined amount of data and said predetermined time are specified
17 prior to obtaining data for that web page such that the number of reformats required in displaying
18 the web page is reduced.

1 21. (New) A broadcast data receiver including a web browser which is configured to
2 perform the method of Claim 17.
